

The workflow layer where AI actually gets work done.

Presented by **Om Shubham**

[WWW.N8N.IO](https://www.n8n.io)

Every enterprise is Buying AI.

Almost No one is Shipping it.

Pilots stall. Models sit idle.

Engineering backlogs grow.

The gap between AI promise and AI in production keeps widening.

The bottleneck is not the model.

It is the wiring between AI, business systems, and the teams expected to use them.

95%

of enterprise GenAI pilots deliver zero measurable P&L impact.

- MIT NANDA, *State of AI in Business 2025*

>80%

of employees use shadow AI tools their IT teams never approved.

- UpGuard *Shadow AI Report, Nov 2025*

23%

of enterprises are actually scaling agentic AI today

- McKinsey, *State of AI 2025*

275

SaaS apps run inside an average enterprise. 84% sit outside IT's control.

- Zylo *SaaS Management Index 2025*

Who feels the **pain** the hardest ?

Operations leaders at mid to large enterprises who are stuck between AI ambition and engineering bandwidth.

Head of Marketing & Sales Operations

The Pain

Has the data. Has the AI budget. Cannot ship without three months of engineering work for every new workflow.

What they need to ship ?

Lead Enrichment and Routing

Campaign personalization at scale

Pipeline reporting & forecasting

CIO / Director of IT & Platform

The Pain

Sees shadow AI everywhere. Worried about data sovereignty, audit trails, and vendor lock-in across 100+ SaaS tools.

What they need to ship ?

Govern AI deployments

Self-hosted control

Reduce SaaS sprawl

n8n is built to serve both - *speed for one, control for the other.*

[WWW.N8N.IO](https://www.n8n.io)

n8n

The workflow layer where AI actually gets work done

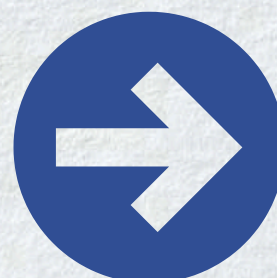

A Visual Canvas

where business teams design AI workflows, and an open engine that runs them at enterprise scale

Trigger

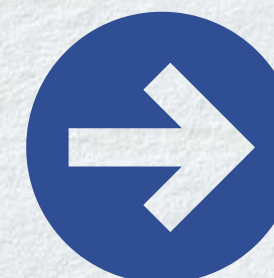

A new lead, ticket, invoice, or customer event fires from any of 500+ connected apps.

Reason

Native AI nodes call your LLM of choice, retrieve context via RAG, and decide the next action.

EXECUTE

Updates CRM, sends a reply, books a meeting, posts to Slack. Action, not just analysis.

Whats this Unlocks ?

< 3 HRS

to ship your first AI workflow

ZERO

engineering tickets needed

> 500

native integrations out of the box

100%

data control, self-host or cloud

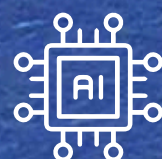

[WWW.N8N.IO](https://www.n8n.io)

Built Differently.

Priced Differently. Governed Differently.

Other tools force a choice between speed and control. n8n was designed so business teams get speed and IT keeps control.

AI - native, not AI - added

Dedicated AI Agent nodes, native MCP support, LangChain integration, persistent agent memory. Built for agents from day one, not patched in later

Self - host or cloud, your call

Run inside your own VPC. Data never leaves your perimeter. SSO, SAML, RBAC, audit logs, Git-based version control. Built for regulated industries

Pay per workflow, not per step

Zapier charges per task. Make charges per operation. n8n charges per workflow execution. A 20-step workflow costs the same as a 2-step one

Open and inspectable

Fair-code licensed. Source available on GitHub with 150,000+ stars. No black box. Your team can audit, extend, and fork what they run

AI Governance

Built for
regulated
industries

Every
action
audited

Granular
access
control

Compliance-
ready from
day one

Full data
sovereignty

Real numbers from teams already shipping with n8n.

Vodafone

Telecom

£ 2.2M
saved

5,000 person-days returned.
33 workflows in production.
£300k/month continuing savings.
Chose n8n over IBM Resilient and
Tines.

Delivery Hero

Food delivery, 70+ countries

200+ hrs
saved every month

Account recovery process cut from
35 minutes to 20. One workflow
handles ~800 requests monthly
with zero IT overhead

StepStone

Online recruitment

25x
faster integration

New data sources integrated in 2
hours instead of 2 weeks. 200+
mission-critical workflows live for
18+ months.

Your Next Move

Run a 30-day pilot on one workflow your team is already doing manually
